

OYEDOLA OLAYINKA DANIEL

Backend Developer | Blockchain Engineer

oolayinkadaniel@gmail.com | +234 08065019591 | [LinkedIn](#) | [GitHub](#)

PROFILE

Backend Developer with hands-on experience building and deploying production APIs, data pipelines, and automated systems in **Python and TypeScript**. Portfolio spans a satellite tracking platform using **sgp4 orbital** mechanics and Supabase, a geospatial earth observation API integrating **Sentinel-2/TiTiler**, a full-stack food marketplace with dual-role auth and PostgreSQL, a Polymarket copy-trading engine with encrypted credential management and **EIP-712 signing**, a file metadata intelligence platform with 18-endpoint REST API, and a Celo blockchain payment gateway. Combines strong engineering fundamentals with product thinking from 5+ years in Web3 and fintech.

SKILLS

Languages: *Python, TypeScript, JavaScript, SQL, Solidity*

Frameworks: *FastAPI, Django, Node.js, Express.js, React*

Databases & Storage: *PostgreSQL, SQLite, Supabase, Alembic (migrations), Cloudinary*

Infrastructure & DevOps: *Docker, Docker Compose, Render, Vercel, Nginx, Git, GitHub*

APIs & Integrations: *REST/OpenAPI, STAC API (Sentinel-2), CelesTrak, sgp4, Polymarket CLOB API, Resend, Open-Meteo*

Blockchain: *Algorand (AVM), Celo, Ethereum/Base, Solidity, EIP-712 signing, Fernet AES-128 encryption*

Concepts: *JWT Auth, Background Workers, API Rate Limiting, HMAC Auth, DB Migrations, Webhook Handling*

WORK EXPERIENCE

Project Manager / Technical Lead | *Synthetic Labs — Texas, USA*

May 2024 – March 2025

Genesis Biolabs — Roblox Studio game technical delivery

- Led technical delivery of Genesis Biolabs, scoping backend systems, coordinating API integrations, and reviewing code contributions from freelance engineers.
- Managed development timelines and technical milestones, delivering all major releases on schedule.

Product Engineer | *Pallete Labs — Ibadan, Nigeria*

August 2022 – January 2024

NFT Mafia DAO and Beings NFT — smart contract and backend integration

- Co-developed smart contract-based NFT and DAO products on Ethereum-compatible chains, covering minting pipelines, wallet integrations, and on-chain governance features.
- Contributed to backend performance improvements, supporting a **10% reduction in churn** through data-backed engineering decisions.

Backend Engineer (Product Role) | *FlashPay Finance — Ibadan, Nigeria* April 2022 – December 2022

Algorand blockchain payment gateway — approved by Algorand Foundation

- Helped build and ship a production blockchain payment gateway on Algorand, achieving a **95% on-time delivery rate** across all milestones.
- Contributed to API design, payment processing flows, and integration planning for **5 major product features** in 6 months.

FEATURED PROJECTS

- **OrbitalAF** — Africa's satellite tracking platform. FastAPI backend computing real-time orbital passes with sgp4, Supabase PostgreSQL for TLE caching, background TLE refresh scheduler, Resend email alerts, weather via Open-Meteo, and Leaflet.js maps. Deployed Render + Vercel. [\(GitHub\)](#)[\(OrbitalAF\)](#)
- **TerraPulse** — Geospatial analysis API built with FastAPI integrating Element84 STAC API for Sentinel-2 scene search, TiTiler for COG tile rendering, Photon/Nominatim geocoding with backend caching, and spectral change detection (NDVI, MNDWI, NBR, built-up index). Dockerised with Nginx production compose. [\(GitHub\)](#) [\(Terrapulse\)](#)
- **CraveSeat** — Production FastAPI backend with dual-role architecture (user/vendor), JWT auth, PostgreSQL + Alembic migrations, Cloudinary media, geospatial mapping module, push notifications, and phone validation. Deployed on Render. [\(GitHub\)](#) [\(CraveSeat\)](#)
- **Polymarket Copy Bot** — Automated copy-trading service with FastAPI backend, background watcher and executor workers, PostgreSQL via Neon DB, Fernet AES-128 key encryption, EIP-712 order signing, HMAC-SHA256 CLOB API auth, slippage protection, and P&L CSV reporting. Deployed on Render. [\(GitHub\)](#)
- **MetaVault** — File metadata intelligence platform for forensic workflows. 18-endpoint Node.js REST API with batch file analysis, risk scoring, job comparison, STIX 2.1 export, tamper-evident audit hash chain, and role-based access. Supports exiftool, ffprobe, and pdftinfo optional extractors. [\(GitHub\)](#) [\(Metavault\)](#)
- **Base Testnet Smart Contract** — Deployed and tested Solidity smart contracts on Ethereum's Base testnet. [\(GitHub\)](#)

EDUCATION

BSc. Food Technology | *University of Ibadan — Ibadan, Nigeria*

Graduated April 2024
